

EBN - Micron

Our EBN-A (amber color) and EBN-B (black color) micron products are used for lapping, honing and polishing of many components in fields of automotive, aerospace and scientific instruments. Our products are available in amber or black. Both are made of medium-high toughness, offering high thermal stability and macro-fracture characteristics. Their angular shape and cutting edges provide excellent performance on hard tool steels, alloyed steels and super-alloys, in demanding lapping and polishing applications. The higher thermal and chemical stability of CBN makes it suitable for high temperature applications.

EBN-A-um (20-30 um)

EBN-B-um (5-10 um)

SIZE CHART

CBN - Micron (EBN-A-um , EBN-B-um)					
0-0.20	✓	1-3	✓	10-20	✓
